

## BTEC Assignment Brief

<b>Qualification</b>	Pearson BTEC International Level 3 Certificate in Information Technology Pearson BTEC International Level 3 Subsidiary Diploma in Information Technology Pearson BTEC International Level 3 Foundation Diploma in Information Technology Pearson BTEC International Level 3 Diploma in Information Technology Pearson BTEC International Level 3 National Extended Diploma in Information Technology
<b>Unit number and title</b>	<b>Unit 13: Software testing</b>
<b>Learning aim(s)</b>	<b>A:</b> Understand the software development and testing methodologies commonly used during the development life cycle to quality assure software
<b>Assignment title</b>	How is software tested?
<b>Assessor</b>	
<b>Issue date</b>	
<b>Hand in deadline</b>	

<b>Vocational Scenario or Context</b>	You have recently started work as a software testing engineer at a start-up company which is creating a new software product. You have been tasked with the testing of the product. You will be part of a small newly recruited team of testers, and you have been asked to prepare induction materials covering the different testing methodologies that could be used.
---------------------------------------	--

<b>Task 1</b>	Create a PowerPoint presentation with accompanying speakers notes in which you evaluate the different testing methodologies (e.g. unit, acceptance, functional, system testing etc.) used in at least two different software development projects which use different development methodologies (e.g. agile, waterfall, Kanban).  You need to consider how the choice of project methodology affects the testing methods, software product, requirements and development team members. You should cover the advantages and disadvantages of each methodology, justifying its suitability for the project, suggesting alternatives if you do not consider it to be
---------------	--

	suitable.
<b>Checklist of evidence required</b>	Completed presentation slides with speaker notes
<b>Criteria covered by this task:</b>	
Unit/Criteria reference	To achieve the criteria you must show that you are able to:
A.D1	Evaluate the characteristics of testing methodologies used in software development projects and how the choice of project methodology affects the testing method, software product, requirements and team members.
A.M1	Compare the characteristics of testing methodologies used in software development projects and how the choice of project methodology affects the testing method, software product, requirements and team members.
A.P1	Explain the characteristics of testing methodologies used in software development projects and how the choice of project methodology affects the testing method, software product, requirements and team members.
